Information on the use of these instructions

Symbols

Danger

This symbol indicates dangers to the life and health of persons due to extremely flammable gas.

Warning

This signal word indicates a hazard with an average risk level which, if not avoided, can result in serious injury or death.

Warning of electrical voltage

This symbol indicates dangers to the life and health of persons due to electrical voltage.

Notice

This signal word indicates important information (e.g. material damage), but does not indicate hazards.

Info

Information marked with this symbol helps you to carry out your tasks quickly and safely.

Follow the manual

Information marked with this symbol indicates that the instructions must be observed.

Safety

Read this manual carefully before starting or using the device. Always store the manual in the immediate vicinity of the device or its site of use.

Warning

Read all safety warnings and all instructions.

Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.

Children shall not play with the appliance. Cleaning and user maintenance shall not be done by children without supervision.

- Do not use the device in potentially explosive rooms or areas and do not install it there.
- Do not use the device in an aggressive atmosphere.
- Place the device in an upright and stable position on a horizontal and stable surface.
- Let the device dry out after a wet clean. Do not operate it when wet.
- Do not use the device with wet or damp hands.
- Do not expose the device to directly squirting water.
- Do not cover the device during operation.
- Do not sit on the device.

- This appliance is not a toy. Keep away from children and animals.
- Check the device occasionally during operation.
- Check accessories and connection parts for possible damage prior to every use of the device. Do not use any defective devices or device parts.
- Ensure that all electric cables outside of the device are protected from damage (e.g. caused by animals). Never use the device if electric cables or the power connection are damaged!
- The mains connection must correspond to the specifications in the Technical annex.
- Insert the mains plug into a properly fused mains socket.
- Observe the device's power input, cable length and intended use when selecting extensions to the power cable. Completely unroll extension cables. Avoid electrical overload.
- Do not under any circumstances use the device if you detect damages on the mains plug or power cable. If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.
Defective power cables pose a serious health risk!
- Before carrying out maintenance, care or repair work on the device, remove the mains plug from the mains socket. Hold onto the mains plug while doing so.
- Switch the device off and disconnect the power cable from the mains socket when the device is not in use.
- When positioning the device, observe the minimum distances from walls and other objects as well as the storage and operating conditions specified in the Technical annex.
- Make sure that the air inlet and outlet are not obstructed.
- Make sure that the suction side is kept free of dirt and loose objects.
- Never insert any objects or limbs into the device.
- Do not remove any safety signs, stickers or labels from the device. Keep all safety signs, stickers and labels in legible condition.
- Only transport the device in an upright position with an emptied condensation tank/tray or drain hose.
- Discharge the collected condensate before transport and storage. Do not drink it. Health hazard!
- Only use original spare parts, for otherwise safe and functional operation cannot be ensured.

Safety warnings for devices containing flammable refrigerants

- Only position the device in rooms where potentially leaking refrigerant cannot accumulate. Unventilated rooms in which the device is installed, operated or stored must be built in a way to ensure that potentially leaking refrigerant cannot accumulate. This serves to avoid fire or explosion hazards resulting from an ignition of the refrigerant by an electric furnace, cooking stove or another ignition source.

Warning

- Store the appliance in a room without continuously operating open flames (for example an operating gas appliance) or other potential ignition sources (for example an operating electric heater, hot surfaces).
- Please note that the refrigerant is odourless.
- Only install the device in compliance with the national installation regulations.
- Please observe the local regulations.
- Observe the national regulations for gas installations.
- Only install, operate and store the device in a room measuring more than 4 m².
- Store the device in a way that no mechanical damage can occur.
- R290 is a refrigerant that complies with European environmental regulations. No part of the cooling circuit may be perforated.
- Observe the maximum refrigerant capacity in the technical data.
- Do not drill into or burn.
- Do not use any means other than those recommended by the manufacturer for accelerating the defrosting process or cleaning the device.
- Every person working with or at the refrigerant circuit must be able to provide a certificate of qualification issued by a body accredited by the industry, demonstrating their competence in the safe use of refrigerants based on a procedure well-known in the industry.
- Service work may only be carried out in accordance with the manufacturer's specifications. If maintenance and repair work require the support of additional persons, the person trained in handling flammable refrigerants shall continuously supervise the work carried out.
- The entire refrigerant circuit is a maintenance-free, hermetically sealed system and may only be maintained or repaired by specialist companies for cooling and air-conditioning or by the manufacturer.

Intended use

Only use the device for drying and dehumidifying room air, while adhering to and following the technical data.

In addition, the device may also be used as a kind of clothes dryer to dry wet laundry.

Intended use comprises:

- dehumidifying and drying:
 - living rooms, bedrooms and basements
 - bathrooms
 - holiday homes, caravans
- maintaining the dryness of:
 - storage spaces, archives, laboratories, garages
 - changing rooms etc.

Any use other than the intended use is regarded as misuse.

Reasonably foreseeable misuse

- The device is not intended for industrial use.
- Do not place any objects, e.g. clothing, on the device.
- Do not use outdoors.
- Do not use the device in the immediate vicinity of swimming pools, bathtubs and showers.
- Never immerse the device in water.
- Do not make any unauthorised modifications, alterations or structural changes to the device.
- Do not place the device on wet or flooded ground, e.g. near floor drains.

Personnel qualification

People who use this device must:

- have basic knowledge of how to safely handle electrical equipment.
- have read and understood the instructions, especially the Safety chapter.

Maintenance tasks which require the housing to be opened must only be carried out by specialist companies for cooling and air-conditioning or by the manufacturer.

Safety signs and labels on the device

Notice

Do not remove any safety signs, stickers or labels from the device. Keep all safety signs, stickers and labels in legible condition.

The following safety signs and labels are attached to the device:

Follow the manual

This symbol indicates that the instructions must be observed.

Follow the repair manual

Disposal, maintenance and repair work of the refrigerant circuit may only be carried out in accordance with the manufacturer's specifications and by persons having a certificate of qualification. A corresponding repair manual is available from the manufacturer upon request.

Residual risks

Danger

Natural refrigerant propane (R290)!

H220 – Extremely flammable gas.

H280 – Contains gas under pressure; may explode if heated.

P210 – Keep away from heat, sparks, open flames and other ignition sources. No smoking.

P377 – Leaking gas fire: Do not extinguish, unless leak can be stopped safely.

P410+P403 – Protect from sunlight. Store in a well-ventilated place.

Warning of electrical voltage

Work on the electrical components must only be carried out by an authorised specialist company!

Warning of electrical voltage

Risk of electric shock!

The device is not protected against water.

There is a risk of electric shock!

Never use the device in areas where dripping, spraying or running water can enter the device! Never immerse the device in water!

Warning of electrical voltage

Risk of electric shock!

Risk of an electric shock if the device comes into contact with water!

Do not use this device in the immediate vicinity of bathtubs, showers or swimming pools!

Warning of electrical voltage

Before any work on the device, remove the mains plug from the mains socket!

Do not touch the mains plug with wet or damp hands.

Hold onto the mains plug while pulling the power cable out of the mains socket.

Notice

Do not operate the device without an air filter inserted into the air inlet!

Without the air filter, the inside of the device will be heavily contaminated. This can reduce the performance and result in damage to the device.

Information about the device

Device description

The device uses the principle of condensation to automatically dehumidify rooms.

The fan sucks damp room air through the air inlet, the air filter, the evaporator and to the condenser located behind it. The air is cooled at the cold evaporator until it is below the dew point.

Water vapour contained in the room air precipitates on the evaporator fins as condensation or rime. The dehumidified, cooled air is slightly warmed at the condenser and blown out again. The drier air thus conditioned mixes with the air in the room. The humidity in the room where the device is positioned is reduced as air constantly circulates through the device.

Depending on the air temperature and the relative humidity, the condensed water either drops continuously or only during the defrost phase through the integrated drain nozzle into the condensation tank below. It is fitted with a float to measure the filling level.

The device has a control panel for operating and controlling the functions.

Once the maximum filling level of the condensation tank is reached or if the tank is not installed correctly, the condensation tank indicator light on the control panel will be illuminated and an error code will be displayed as well (see chapter Operating elements). The device switches off. The indications only disappear once the emptied condensation tank is reinserted.

Optionally, the condensed water can be drained by attaching a hose at the condensation connection.

The device can reduce the relative humidity of a room to approx. 35 %.

In addition, the device may also be used as a kind of clothes dryer to dry wet laundry in living or working spaces.

Because of the heat radiation generated during operation, the room temperature may rise slightly.

The device is not protected against water (IPX0).

Behaviour in the event of an emergency

1. Switch the device off.
2. Disconnect the device from the mains by removing the mains plug from the socket. When doing so, be sure to hold the plug, not the cable.
3. Do not reconnect a defective device to the mains.

Device depiction

8	Condensation tank with filling level indicator
9	Air outlet

Transport and storage

Notice

If you store or transport the device improperly, the device may be damaged.

Note the information regarding transport and storage of the device.

Transport

Please note that additional transport regulations might apply to devices containing flammable refrigerants. The equipment's arrangement and the maximum number of components to be transported together can be gathered from the applicable transport regulations.

To make the device easier to transport, it is fitted with a handle.

To make the device easier to transport, it is fitted with wheels.

Before transporting the device, observe the following:

- Switch the device off.
- Disconnect the device from the mains by removing the mains plug from the socket. When doing so, be sure to hold the plug, not the cable.
- Drain the remaining condensate from the device and the condensation drain hose (see chapter Maintenance).
- Do not use the power cable to drag the device.
- Only wheel the device on firm and level surfaces.

After transporting the device, proceed as follows:

- Set up the device in an upright position after transport.

Storage

Before storing the device, observe the following:

- Drain the remaining condensate from the device and the condensation drain hose (see chapter Maintenance).
- Clean the condensation tank and/or the condensation drain hose if necessary (see chapter Maintenance).
- Disconnect the device from the mains by removing the mains plug from the socket. When doing so, be sure to hold the plug, not the cable.

When the device is not being used, observe the following storage conditions:

- Only store the device in a room measuring more than 4 m².
- Only position the device in rooms where there is no source of ignition (e.g. open flames, an active gas appliance, an electric heater).
- Store the device in a dry location and protected from frost and heat.
- Store the device in an upright position where it is protected from dust and direct sunlight.
- If required, use a cover to protect the device from invasive dust.
- Place no further devices or objects on top of the device to prevent it from being damaged.

Assembly and start-up

Scope of delivery

- 1 x Device
- 1 x Condensation drain hose, length: 0.6 m, diameter: 14 mm
- 1 x Manual

Unpacking the device

Warning

There is a danger of suffocation for children due to packaging material! Keep packaging films and parts away from children. There is a risk of death due to suffocation.

1. Open the cardboard box and take the device out.
2. Completely remove the packaging.
3. Fully unwind the power cable. Make sure that the power cable is not damaged and that you do not damage it during unwinding.

Start-up

When positioning the device, observe the minimum distance from walls or other objects as described in the chapter Technical annex.

- Store the appliance in a room without continuously operating open flames (for example an operating gas appliance) or other potential ignition sources (for example an operating electric heater, hot surfaces).
- Place the device in an upright and stable position on a horizontal and stable surface.
- Do not create tripping hazards when laying the power cable or other electric cables, especially when positioning the device in the middle of the room. Use cable bridges.
- Make sure that extension cables are completely unrolled.
- When positioning the device, keep a sufficient distance to heat sources.
- Make sure that no curtains or other objects interfere with the air flow.

Inserting the air filter

Notice

Do not operate the device without an air filter inserted into the air inlet!

Without the air filter, the inside of the device will be heavily contaminated. This can reduce the performance and result in damage to the device.

Inserting the condensation tank

- Ensure that the float inside the condensation tank is inserted correctly.
- Ensure that the condensation tank is empty and inserted correctly.

Connecting the power cable

- Insert the mains plug into a properly secured mains socket.

- Before restarting the device, check the condition of the power cable. If there are doubts as to the sound condition, contact the customer service.
- Only position the device in rooms where potentially leaking refrigerant cannot accumulate.

Operation

Notes:

- Avoid open doors and windows.
- After being switched on, the device operates fully automatically.
- The fan continues to run in dehumidification mode for 3 minutes after the selected setpoint has been reached.

Operating elements

No.	Designation	Meaning
10	<i>TIMER</i> LED	Illuminated when the timer is activated
11	<i>Fan speed</i> LEDs	Fan speed indication: <i>Low</i> <i>Med(ium)</i> <i>High (low + med.)</i>
12	<i>Full</i> LED	Condensation tank full or not inserted correctly
13	<i>Dryer</i> LED	<i>Laundry drying</i> mode is enabled
14	<i>Cont.</i> LED	<i>Continuous operation</i> is enabled
15	<i>Comfort</i> LED	<i>Comfort</i> mode is enabled
16	<i>Power</i> LED	Illuminated during operation.
17	<i>ON/OFF</i> button	Power button: Switching the device on or off
18	<i>MODE</i> button	Selection button for operating modes: <i>Dehumidification</i> (not indicated) <i>Dryer</i> = laundry drying function <i>Cont.</i> = continuous operation <i>Comfort</i> = comfort mode
19	<i>Increase value</i> button	Setting the relative room humidity Setting the number of hours for the timer function

No.	Designation	Meaning
20	Segment display	Indication of the current relative room humidity level Indication of the relative room humidity level during set-up Indication of the number of hours during timer programming Display of error codes
21	<i>Decrease value</i> button	Setting the relative room humidity Setting the number of hours for the timer function
22	<i>FAN</i> button	Setting high, medium or low fan speed
23	<i>TIMER</i> button	Switches the timer function on or off.

Warning of electrical voltage

Risk of electric shock!

The device is not protected against water.

There is a risk of electric shock!

Never use the device in areas where dripping, spraying or running water can enter the device! Never immerse the device in water!

Info

An acoustic signal is emitted each time a setting is activated.

Switching the device on

Once you have completely installed the device as described in the chapter Assembly and start-up, you can switch it on.

1. Press the *ON/OFF* button (17).

⇒ The device starts in *dehumidification* mode.

Setting the operating mode

- Dehumidification
- Continuous operation
- Comfort mode
- Laundry drying function

Dehumidification

The device runs until the desired relative room humidity is reached. Then the compressor switches off and the fan continues to run for another 3 minutes before it switches off. Once the desired relative room humidity is exceeded, the compressor and fan switch back on.

In this operating mode, the desired relative room humidity can be set at any time in increments of 5 % within a setting range of 35 % to 85 %.

1. Press the *MODE* button (18) until only the *Power* LED (16) is lit.
2. Press the *Increase value* (19) or *Decrease value* button (21) to select the relative room humidity.
 - ⇒ The desired relative room humidity is indicated in the segment display (20) for approx. 5 seconds. Then the current relative room humidity is displayed again.

Setting the desired relative room humidity

You can only change the relative room humidity in *dehumidification* mode.

1. Press the *Increase value* (19) or *Decrease value* button (21) to set the relative room humidity. Setting is possible within the range between 35 % and 85 % in steps of 5 %.
 - ⇒ The desired relative room humidity is indicated in the segment display (20) for approx. 5 seconds. Then the current relative room humidity is displayed again.

Setting the fan speed

With this function you can choose between low, medium and high fan speed. The fan speed can only be adjusted in *dehumidification* mode. The default setting for the *laundry drying function* is the highest level.

1. Repeatedly press the *FAN* button (22) to select the desired fan speed.

Continuous operation mode

The device dehumidifies the air constantly and regardless of the relative room humidity. The desired relative room humidity cannot be adjusted in this operating mode.

1. Press the *MODE* button (18) until the *Cont.* LED (14) is lit.
 - ⇒ *Continuous operation* is selected.

Info

For continuous operation the condensation drain hose can be connected in order to continuously drain the accumulating condensate.

Comfort mode

Comfort mode ensures an agreeable humidity level ranging between 45 % and 55 %. Depending on the room temperature the device automatically regulates the convenient humidity level choosing a value from 45 % – 50 % – 55 %.

In this operating mode it is not possible to regulate the humidity level manually.

1. Press the *MODE* button (18) until the *Comfort* LED (15) is lit to switch comfort mode on or off.

Setting the timer

For the device to switch on or off automatically after a predefined number of hours (max. 24 hrs) you can programme the timer.

The timer can be programmed in increments of 0.5 hours (0 to 10 h) or in increments of 1 hour (10 to 24 h).

The timer can be set in all operating modes.

You can activate the function regardless of the device being switched on or off.

Notice

The device must not be left unattended in a freely accessible room with an activated timer.

Automatic switch-on

- ✓ The device is switched off.
- 1. Press the *TIMER* button (23) to programme automatic switch-on.
 - ⇒ The *TIMER* LED (10) is illuminated.
 - ⇒ The segment display (20) indicates the number of hours until automatic switch-on. Standard: 0.0
- 2. Press the *Increase value* (19) and *Decrease value* buttons (21) to set a number of hours until automatic switch-on.
 - ⇒ The number of hours is indicated on the segment display (20) for approx. 5 s. Then the current humidity level of the room will be indicated.
 - ⇒ The timer setting equals the desired number of hours.
 - ⇒ After the predefined time, the device switches itself on.

Automatic switch-off

- ✓ The device is switched on.
- 1. Press the *TIMER* button (23) to programme automatic switch-off.
 - ⇒ The *TIMER* LED (10) is illuminated.
 - ⇒ The segment display (20) indicates the number of hours until automatic switch-off. Standard: *0.0*
- 2. Press the *Increase value* (19) and *Decrease value* buttons (21) to set a number of hours until automatic switch-off.
 - ⇒ The number of hours is indicated on the segment display (20) for approx. 5 s. Then the current humidity level of the room will be indicated.
- 3. The device keeps running until the given switch-off time has expired or until the device is switched off manually.
 - ⇒ The timer setting equals the desired number of hours.
 - ⇒ After the predefined time, the device switches itself off.

Notice

You can deactivate automatic switch-on and switch-off by setting the respective number of hours back to 0 or by manually switching the device on or off. If error code *P2* is indicated on the segment display (20), the timer is also disabled. A full condensation tank can cause the device to be switched off before the set number of hours until automatic switch-off have elapsed.

Memory function

After a power failure during operation the device will automatically be switched back on after a while. The selected settings are saved. Any programmed timer settings will not be saved.

Auto stop function

If the water tank is full, not inserted correctly or the relative room humidity has been reached, the device will stop automatically.

Operation with hose attached to the condensation connection

For continuous operation or unattended dehumidification, please connect the supplied condensation drain hose to the device.

- ✓ The supplied hose (diameter = 14 mm) is ready for use.
- ✓ The device is switched off.

1. Remove the rubber plug.

2. Push one end of the hose onto the hose connection.

3. Guide the other hose end to a suitable drain or sufficiently dimensioned collection container. Please note that the hose must not be kinked.

Remove the hose if you want to collect the condensate in the condensation tank again. Allow the hose to dry prior to storage. The hose can be connected in any operating mode for continuous operation.

Automatic defrost

At low ambient temperatures, ice may form at the evaporator during dehumidification. The device will then carry out an automatic defrost. Dehumidification is briefly interrupted during defrosting. The fan keeps running. Error code *P1* for automatic defrost will be indicated on the segment display (20).

The duration of the defrost process can vary. Do **not** switch off the device during automatic defrost. Do **not** remove the mains plug from the mains socket.

Drying laundry

In addition, the device may also be used as a kind of clothes dryer to dry wet laundry in living or working spaces.

When positioning the device or a clothes horse, please observe the minimum distances specified in the technical data.

The following humidity values are suitable for drying laundry:

- cupboard dry = 46 % relative humidity
- iron dry = 58 % relative humidity
- slightly dried = 65 % relative humidity

Adjust the settings for the relative humidity level to the device (e.g. 60 % relative humidity for iron dry laundry). If necessary, use a measuring device to determine the humidity level.

The relative humidity cannot be adjusted in this operating mode.

The maximum operating time in this mode is 10 hours.

1. Press the **MODE** button (18) until the **Dryer** LED (13) is lit.
⇒ The *function for drying laundry* is activated.

Shutdown

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Switch off the device.
- Disconnect the device from the mains by removing the mains plug from the socket. When doing so, be sure to hold the plug, not the cable.
- If necessary, remove the condensation drain hose and any residual fluid from it.
- Empty the condensation tank/tray if necessary.
- If required, clean the device according to the "Maintenance" chapter.
- Store the device according to the Transport and storage chapter.

Errors and faults

The device has been checked for proper functioning several times during production. If malfunctions occur nonetheless, check the device according to the following list.

Notice

Wait for at least 3 minutes after maintenance and repair work. Only then switch the device back on.

The device does not start:

- Check the power connection.
- Check the power cable and mains plug for damage.
- Check the on-site fusing.
- Check the filling level of the condensation tank, and empty it if necessary. The *Full* LED (12) must not light up. Error code *P2* must not be indicated on the segment display (20).
- Check the condensation tank for correct seating.
- Check the room temperature. Observe the device's permissible operating range according to the technical data. Possibly, the device does not start because the ambient temperature is too low ($< 5^{\circ}\text{C}$).
- If the device is not starting, have the electrics checked by a specialist company or by the manufacturer.

The device is running, but there is no formation of condensate:

- Check the float in the condensation tank for dirt. If necessary, clean the condensation tank. The float must be able to move freely.
- Check the room temperature. Observe the device's permissible operating range according to the technical data. Possibly, the device does not start because the ambient temperature is too low ($< 5^{\circ}\text{C}$).
- Ensure that the relative room humidity complies with the technical data.
- Check the preselected relative room humidity. The humidity in the room must be above the selected range.
- Check whether the device is running in *comfort mode*. In this case, the compressor switches off automatically once the relative room humidity is below 45 %.
- Check the air filter for dirt. If necessary, clean or replace the air filter.
- From the outside, check the condenser for dirt (see chapter Maintenance). If the condenser is dirty, have it cleaned by a specialist company or by the manufacturer.
- The device might carry out an automatic defrost. During automatic defrost, the device does not dehumidify.

The device is loud or vibrates:

- Check whether the device is set up in a stable and upright position.

Condensate is leaking:

- Check the device for leaks.

The compressor does not start:

- Check the room temperature. Observe the device's permissible operating range according to the technical data. Possibly, the device does not start because the ambient temperature is too low ($< 5^{\circ}\text{C}$).
- Ensure that the relative room humidity complies with the technical data.
- Check the preselected relative room humidity. The humidity in the room must be above the selected range.
- Check whether the device is running in *comfort mode*. In this case, the compressor switches off automatically once the relative room humidity is below 45 %.
- Check whether the overheating protection of the compressor has tripped. Disconnect the device from the mains and let it cool down for approx. 10 minutes before reconnecting it.
- The device might carry out an automatic defrost. During automatic defrost, the device does not dehumidify.

The device gets very warm, is loud or is losing power:

- Check the air inlet and air filter for dirt. Remove external dirt.
- From the outside, check the device for dirt (see chapter Maintenance). If the inside of the device is dirty, have it cleaned by a specialist company for cooling and air-conditioning or by the manufacturer.

The device still does not operate correctly after these checks:

Please contact the customer service. If necessary, bring the device to a specialist company for cooling and air-conditioning or to the manufacturer for repair.

Error codes

The following error messages can be displayed on the segment display (20):

Error code	Cause	Remedy
AS	Fault at humidity sensor	Disconnect the device briefly from the mains. Should the error still be displayed after the restart, please contact the customer service.
ES	Fault at temperature sensor	
E3	General fault at the device	
EC	Leaking refrigerant	Switch the device off and contact the customer service.
P1	Automatic defrost	This is not a fault. Wait for a brief period. The indication will disappear the moment the automatic defrost process is completed.
P2	Condensation tank full or not inserted correctly	Empty the condensation tank or check the condensation tank for correct fit.

Activities required before starting maintenance

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Disconnect the device from the mains by removing the mains plug from the socket. When doing so, be sure to hold the plug, not the cable.

Warning of electrical voltage

Tasks which require the device to be opened must only be carried out by authorised specialist companies or by the manufacturer.

Refrigerant circuit

A3 **Danger**

Natural refrigerant propane (R290)!

H220 – Extremely flammable gas.

H280 – Contains gas under pressure; may explode if heated.

P210 – Keep away from heat, sparks, open flames and other ignition sources. No smoking.

P377 – Leaking gas fire: Do not extinguish, unless leak can be stopped safely.

P410+P403 – Protect from sunlight. Store in a well-ventilated place.

- The entire refrigerant circuit is a maintenance-free, hermetically sealed system and may only be maintained or repaired by specialist companies for cooling and air-conditioning or by the manufacturer.

Safety signs and labels on the device

Check the safety signs and labels attached to the device at regular intervals. Replace illegible safety signs!

Cleaning the housing

Clean the housing with a soft, damp and lint-free cloth. Make sure that no moisture enters the housing. Protect electrical components from moisture. Do not use any aggressive cleaning agents such as cleaning sprays, solvents, alcohol-based or abrasive cleaners to dampen the cloth.

Visual inspection of the inside of the device for dirt

1. Remove the air filter.
2. Use a torch to illuminate the openings of the device.
3. Check the inside of the device for dirt.
4. If you see a thick layer of dust, have the inside of the device cleaned by a specialist company for cooling and air-conditioning or by the manufacturer.

5. Put the air filter back in.

Cleaning the air filter

Notice

Ensure that the air filter is not worn or damaged. The corners and edges of the air filter must not be deformed or rounded. Before reinserting the air filter, make sure that it is undamaged and dry!

The air filter has to be cleaned as soon as it is dirty. This is brought to light e.g. by a reduced capacity (see chapter Errors and faults).

1. Remove the air filter from the device.

2. Clean the filter using a slightly damp, soft, lint-free cloth. If the air filter is heavily contaminated, clean it with warm water mixed with a neutral cleaning agent.

3. Allow the filter to dry completely. Do not insert a wet filter into the device!
4. Reinsert the air filter into the device.

Emptying the condensation tank

If the condensation tank is full or not inserted correctly, an acoustic signal will be emitted. Moreover, the *Full* LED (12) will be lit and error code *P2* indicated on the segment display (20). The compressor and fan will switch off.

1. Take the condensation tank out of the device.

2. Empty the condensation tank into a drain or sink.

3. Rinse the tank with clear water. Clean the tank regularly using a mild cleaning agent (no detergent!).
4. Refit the condensation tank into the device. Make sure not to damage the float when inserting or removing the condensation tank. In doing so, make sure that the float is positioned correctly. In doing so, make sure that the condensation tank is inserted correctly, since otherwise the device cannot be switched back on.

Activities required after maintenance

If you want to continue using the device:

- Reconnect the device to the mains.

If you do not intend to use the device for a considerable time:

- Store the device according to the Transport and storage chapter.

Technical annex

Technical data

Parameter	Value	
Model	TTK 54 E	TTK 66 E
Max. dehumidification performance	18 l / 24 h	24 l / 24 h
Dehumidification performance @ 30 °C and 80 % RH	16 l / 24 h	20 l / 24 h
Air flow rate	150 m³/h	168 m³/h
Ambient temperature	5 °C to 32 °C	5 °C to 32 °C
Operating range	35 % to 85 % RH	35 % to 85 % RH
Suction side pressure	1.0 MPa	1.0 MPa
Discharge side pressure	2.6 MPa	2.6 MPa
Max. permissible pressure	2.6 MPa	2.6 MPa
Mains connection	220–240 V / 50 Hz	220–240 V / 50 Hz
Max. power consumption	0.43 kW	0.44 kW
Nominal current	2.2 A	2.3 A
Fusing 	3.15 A / 250 V AC	3.15 A / 250 V AC
Type of protection	IPX0	IPX0
Refrigerant	R290	R290
Amount of refrigerant	70 g	70 g
GWP factor	0.02 (IPCC6)	0.02 (IPCC6)
CO ₂ equivalent	0.0000014 t	0.0000014 t
Condensation tank capacity	3 l	3 l
Sound pressure level (at a distance of 1 m)	46 dB(A)	46 dB(A)
Dimensions (length x width x height)	245 x 350 x 510 mm	245 x 350 x 510 mm
Minimum distance to walls and other objects	A: top: 40 cm B: rear: 20 cm C: side: 20 cm D: front: 20 cm	40 cm 20 cm 20 cm 20 cm
Weight	14 kg	14 kg

Circuit diagram TTK 54 E

Notes: Display and Fan's connctors must be match the actual indicates.

Notes:
This symbol indicates the element is optional, the actual shape shall prevail

Circuit diagram TTK 66 E

Notes: Display and Fan's connntors must be match the actual indicates.

Notes:
This symbol indicates the element is optional, the actual shape shall prevail

Overview of spare parts TTK 54 E

Note: The position numbers of the spare parts differ from those describing the positions of the components mentioned in these instructions.

Spare parts list TTK 54 E

NO.	SPARE PART	QTY.	NO.	SPARE PART	QTY.
1	Water Tank Assembly	1	4.2	Micro Switch	1
1.1	Water Tank Subassembly	1	4.3	Fan Motor Capacitor	1
1.1.1	Dobber Case	1	5	Chassis Subassembly	1
1.1.2	Handle of Water Tank	1	5.1	Chassis	1
2	Front Panel Assembly	1	5.2	Universal Wheel	4
2.1	Front Panel Subassembly	1	6	European Standard Power Cord	1

Disposal

Always dispose of packing materials in an environmentally friendly manner and in accordance with the applicable local disposal regulations.

The icon with the crossed-out wheeled bin indicates that this device and any associated components must not be disposed of with household waste at the end of their life, in accordance with the Waste Electrical and Electronic Equipment Directive (2012/19/EU) and national laws.

You will find collection points for free return of waste electrical and electronic equipment in your vicinity. The addresses can be obtained from your municipality or local administration. You can also find out about other return options that apply for many EU countries on the website <https://hub.trotec.com/?id=45090>. Otherwise, please contact an official recycling centre for electronic and electrical equipment authorised for your country.

The separate collection of waste electrical and electronic equipment aims to enable the re-use, recycling and other forms of recovery of waste equipment as well as to prevent negative effects for the environment and human health caused by the disposal of hazardous substances potentially contained in the equipment.

Have the refrigerant (propane) disposed of appropriately and according to the national regulations by a company with the relevant certification (European Waste Catalogue 160504).

Only for United Kingdom

According to Waste Electrical and Electronic Equipment Regulations 2013 (SI 2013/3113) (as amended) devices that are no longer usable must be collected separately and disposed of in an environmentally friendly manner.
